MINING / CONSTRUCTION

LOKSET® RESIN CARTRIDGES A SERIES
REINFORCED POLYESTER RESIN ANCHOR

DESCRIPTION
The Lokset® Resin Cartridge A Series is specifically intended to be used in conjunction with a #6 (3/4 inch) steel roof bolt in a 1-inch borehole. Lokset® Resin Cartridges can enhance the performance of your current roof control system. The Lokset® Resin Cartridge A Series consists of two compartments separated by a physical barrier. One compartment contains a polyester resin mastic and the other an organic peroxide catalyst. The rotation of the bolt during installation ruptures the cartridge, shreds the film and mixes the two components, thus causing a chemical reaction which transforms the resin mastic to a solid anchor.

The A Series Cartridge is 23mm or 0.9 inches in diameter. This combination provides the ideal annulus for proper mixing and maximum performance.

The A Series Cartridge is available in lengths ranging from one to eight grouted feet. The cartridge is also available in a variety of speeds including: Super Slow (1530), X-Slow (0510), Slow (-90), Medium (-45), Fast (-35), X-Fast (-20) and Super-Fast (-10). A slow cartridge gels in one minute at 90 degrees F (32.2 degrees C), medium gels in one minute at 45 degrees F (7.2 degrees C), etc. For more information, please refer to the Lokset® Resin Cartridge product line brochure and Resin Usage Chart.

USES
Millions of Lokset® Resin Cartridges are used every year for permanent rock reinforcement in mines, tunnels and foundations.

ADVANTAGES
• Proven – After introducing resin anchors to the United States (1971), Lokset® Resin Cartridges have a proven track record of success
• Speed – The fast-gelling Lokset® Resin Cartridges enable rapid installation to be carried out, with application of load in minutes
• Viscosity – The A series Lokset® Resin Cartridge is available in High, Medium, Low and Very Low Insertion Force (VLIF) viscosities. The VLIF formulation is unique in the industry and provides optimum performance with cable and mechanical assisted resin point anchor rock bolts

APPLICATION METHOD
Contact your local Minova representative if the A Series cartridge is to be used in other applications.

1. Before use, read the installation and safety information provided to include the product Safety Data Sheet (SDS).
2. To obtain a consistent set time, make sure the Lokset® Resin Cartridge and bolt are at mine temperature before use.

3. Drill the borehole to the correct diameter at a depth equal to the length of the bolt plus 1-inch. Mark the drill steel to use as a guide.

4. Insert the appropriate Minova resin cartridge slowly rotating the bolt as you push through resin column.

5. Push the bolt into the hole. Slow rotation of the bolt as it passes through the cartridge is suggested but not required. Ensure each cartridge is completely punctured. For tension rebar applications, rotation is not suggested during bolt insertion.

6. Just below the roof, stop and spin the bolt a minimum of 35 revolutions to mix the cartridge. This should take 3 to 8 seconds.

7. Stop rotation and push the bolt upward with full thrust until the resin sets.

SAFETY INSTRUCTIONS AND LIMITATIONS

Do not over-spin the bolt. If bolt rotation continues through the gel time, damage to the anchor may occur.

Never re-rotate the bolt. Bolt rotation after the final spin may damage the partially set resin.

Observe the usual precautionary measures for handling chemicals, see Lokset® & Eclipse® Resin Cartridge SDS.

PACKAGING AND TRANSPORTATION

Product packaging is dependent upon cartridge length. Please contact a Minova Customer Service Representative for packaging information.

STORAGE AND SHELF LIFE

Lokset® Resin Cartridges can be stored for 12 months in a cool dry, ventilated place. Store away from direct sunlight or other heat sources which can reduce products usability and shelf life. Stock rotation is strongly recommended.
**ADDITIONAL DOCUMENTATION**

Started more than 135 years ago, Minova is a global manufacturer and supplier of chemical and mechanical earth control products and support equipment. With manufacturing plants on five continents and operations in more than 25 countries, Minova is an industry-leading provider of ground support solutions for the underground mining, construction and energy industries.

If further information is required consult Minova Americas website: www.minovaglobal.com.

Chart indicates inches of bolt encapsulation based on standard 12" length Lokset® Resin Cartridges for anchoring and grouting rock bolts. This chart is prepared as a guide based on average drilling conditions in concrete or rock. Field trials should be conducted to determine actual resin requirements. (Inches grouted data includes a calculated 15% loss, which is typical.) *Example: When a 1 1/2" hole is drilled using a 1" diameter deformed (rebar type) bolt, one 3512 (1 3/8: Ø x 12" long) cartridge will grout 15.5 linear inches of bolt. Conduct field trials to ensure correct resin requirements for both anchor and grout “zones” for individual bolt lengths and diameters. |
