TREE ANCHORING

PLATIPUS MECHANICAL ANCHORS

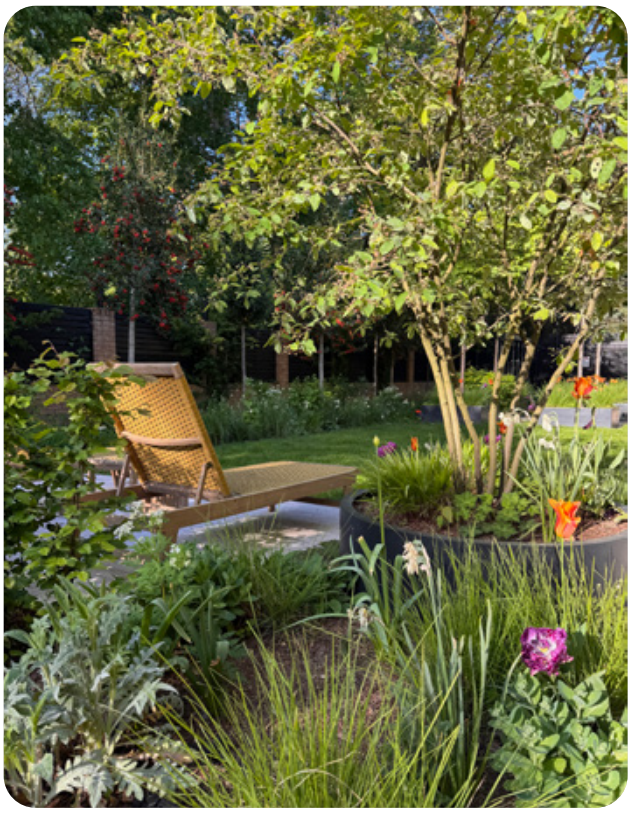

The Woodland Edge Retreat - UK

Platipus D-MAN™ Tree Anchoring System

OVERVIEW >>>>

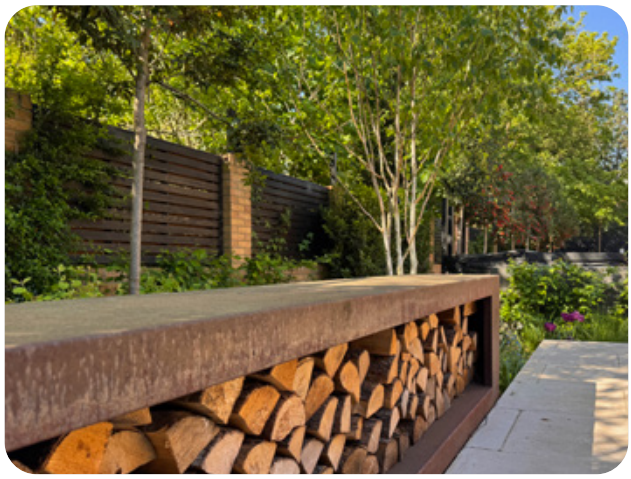

The Woodland Edge Retreat began as an empty plot beside a brand-new home with bare ground, no planting or structure, and nothing but potential. The project's landscape contractor, **Aoba Landscapes**, developed an ambitious brief to create a garden that felt like a true extension of the house, with space to entertain, relax and play, while respecting a strict dark-skies policy from the neighbouring common.

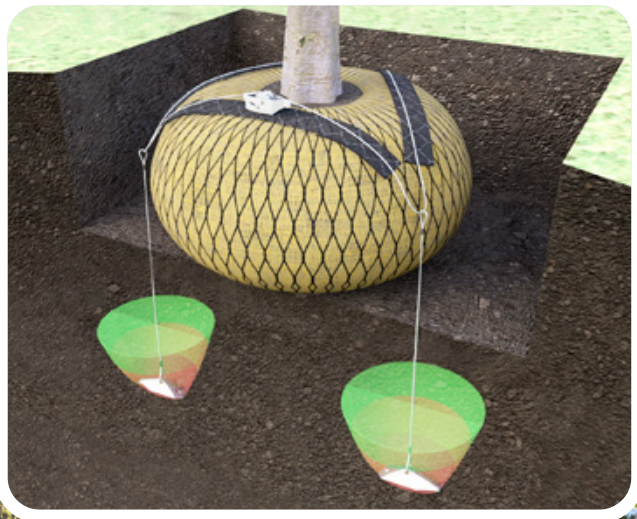

Over 20 weeks, Aoba transformed the 530m² plot into a fully resolved landscape. A fire pit terrace became its social heart, framed by dining and lounging zones, while planting softened the architecture and restored privacy. **Twenty-five trees were woven through the scheme and secured below ground with Platipus Tree Anchors**, providing reliable stability without visible stakes disrupting the clean, contemporary design.

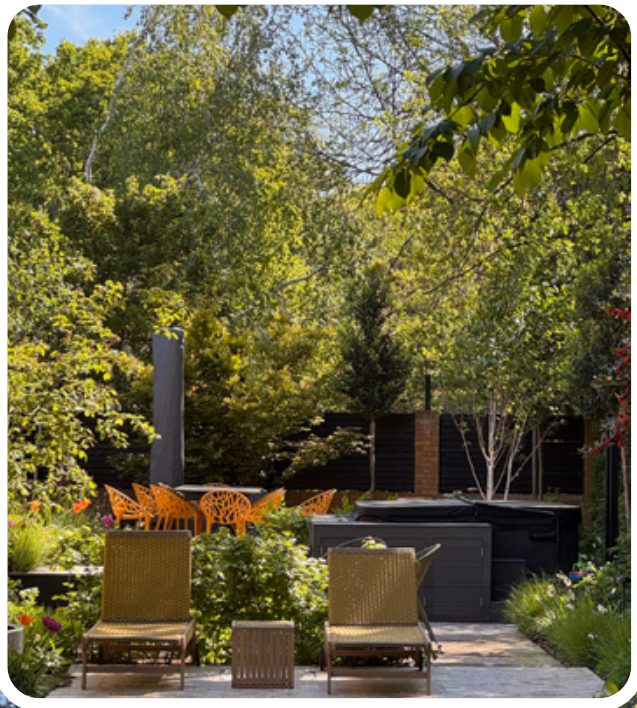

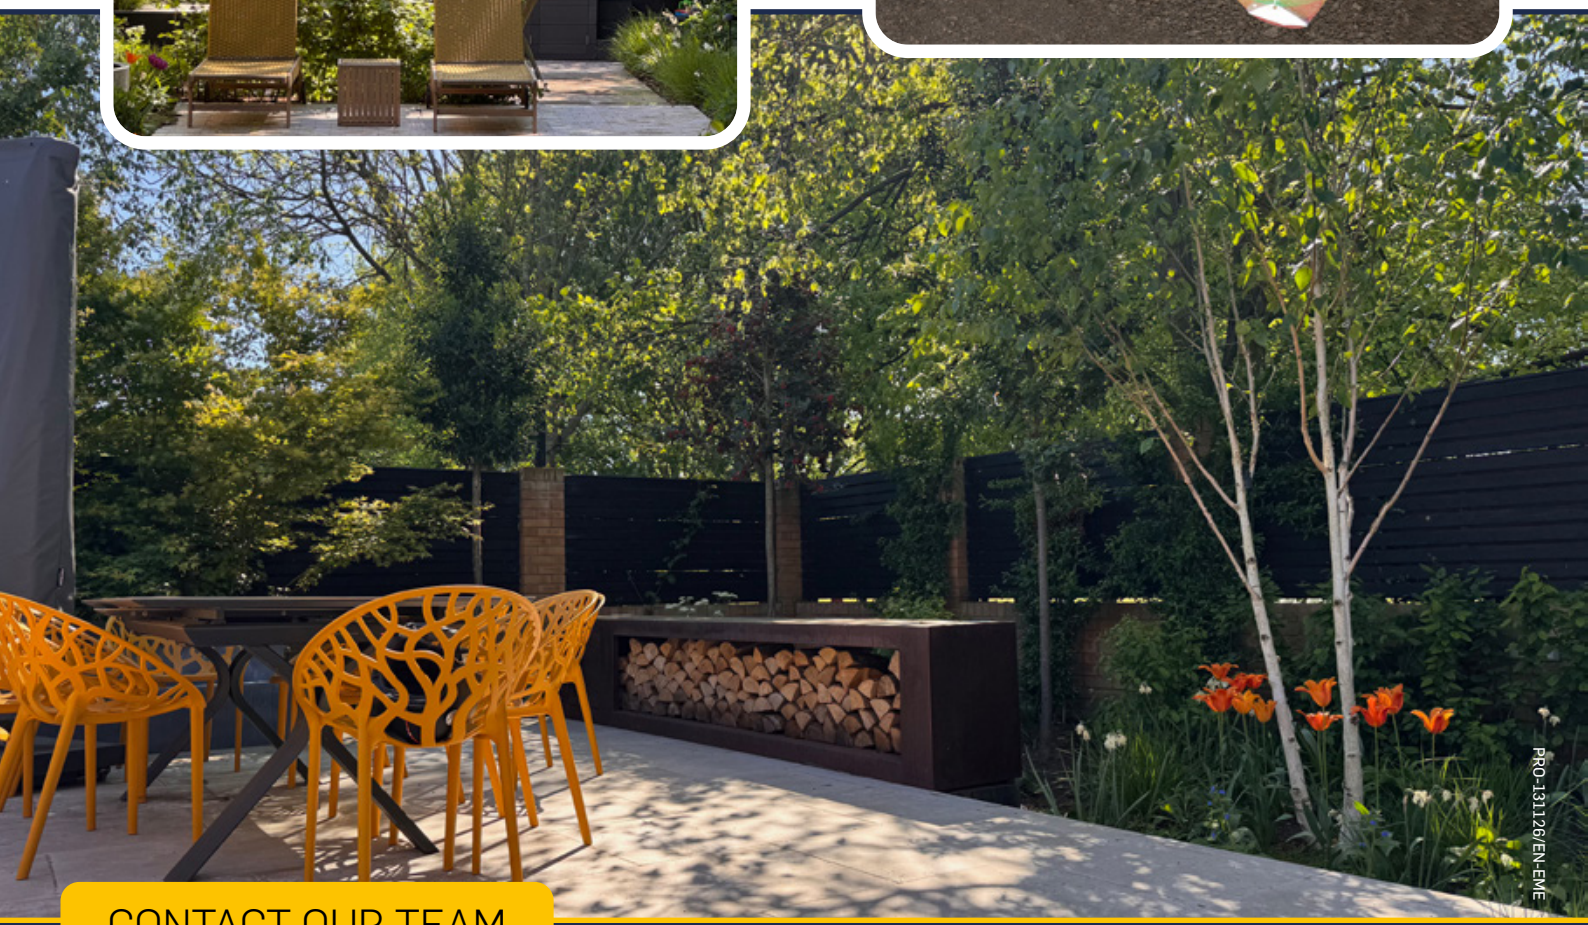

TREE ANCHORING

The real jewel sits above it all: a roof terrace conceived as a private retreat inspired by New York's High Line (which also featured trees secured using Platipus Tree Anchoring Systems). Aoba answered the brief with lightweight planting and integrated seating. Engineering elegance meeting design ambition, exquisitely delivered by the Aoba team.
